Card game

"Poker player" redirects here. For the magazine, see Poker Player

A game of

Texas hold 'em in progress. "Hold 'em" is a popular form of poker.

Poker is a family of

comparing card games in which players wager over which hand is best according to that
specific game's rules. It is played worldwide, but in some places the rules may vary.

While the earliest known form of the game was played with just 20 cards, today it is
usually played with a standard deck, although in countries where short packs are
common, it may be played with 32, 40 or 48 cards.[1] Thus poker games vary in deck
configuration, the number of cards in play, the number dealt face up or face down, and
the number shared by all players, but all have rules that involve one or more rounds of
betting.

In most modern poker games, the first round of betting begins with one or more
of the players making some form of a forced bet (the blind or ante). In standard poker,
each player bets according to the rank they believe their hand is worth as compared to
the other players. The action then proceeds clockwise as each player in turn must
either match (or "call") the maximum previous bet, or fold, losing the amount bet so
far and all further involvement in the hand. A player who matches a bet may also
"raise" (increase) the bet. The betting round ends when all players have either called
the last bet or folded. If all but one player folds on any round, the remaining player
collects the pot without being required to reveal their hand. If more than one player
remains in contention after the final betting round, a showdown takes place where the
hands are revealed, and the player with the winning hand takes the pot.

With the

exception of initial forced bets, money is only placed into the pot voluntarily by a
player who either believes the bet has a positive expected value or who is trying to
bluff other players for various strategic reasons. Thus, while the outcome of any
particular hand significantly involves chance, the long-run expectations of the players
are determined by their actions chosen on the basis of probability, psychology, and
game theory.

Poker has increased in popularity since the beginning of the 20th century and has gone from being primarily a recreational activity confined to small groups of enthusiasts to a widely popular activity, both for participants and spectators, including online, with many professional players and multimillion-dollar tournament prizes.[2]

History [edit]

While poker's exact origin is the subject of debate, many game scholars point to the French game Poque and the Persian game As-Nas as possible early inspirations.[3] For example, in the 1937 edition of Foster's Complete Hoyle, R. F. Foster wrote that "the game of poker, as first played in the United States, five cards to each player from a twenty-card pack, is undoubtedly the Persian game of As-Nas." However, in the 1990s the notion that poker is a direct derivative of As-Nas began to be challenged by gaming historians including David Parlett. What is certain, however, is that poker was popularized in the American South in the early 19th century, as gambling riverboats in the Mississippi River and around New Orleans during the 1830s helped spread the game. One early description of poker was played on a steamboat in 1829 is recorded by the English actor, Joe Cowell. The game was played with twenty cards ranking from Ace (high) to Ten (low).[4]

In contrast to this version of poker, seven-card stud only appeared in the middle of the 19th century, and was largely spread by the US military.[5] It became a staple in many casinos following the second world war, and grew in popularity with the advent of the World Series of Poker in the 1970s.[6]

Texas hold 'em and other community card games began to dominate the gambling scenes over the next couple of decades. The televising of poker was a particularly strong influence increasing the popularity of the game during the turn of the millennium, resulting in the poker boom a few years later between 2003 and 2006. Today the game has grown to become an extremely popular pastime worldwide.

Gameplay [edit

Further information on betting rules: Betting in poker

In casual play, the right to deal a hand typically rotates among the players and is marked by a token called a dealer button (or buck). In a casino, a house dealer handles the cards for each hand, but the button (typically a white plastic disk) is rotated clockwise among the players to indicate a nominal dealer to determine the order of betting. The cards are dealt clockwise around the poker table, one at a time.

One or more players are usually required to make forced bets, usually either an ante or a blind bet (sometimes both). The dealer shuffles the cards, the player on the chair to their right cuts, and the dealer deals the appropriate number of cards to the players one at a time, beginning with the player to their left. Cards may be dealt either face-up or face-down, depending on the variant of poker being played. After the initial deal, the first of what may be several betting rounds begins. Between rounds, the players' hands develop in some way, often by being dealt additional cards or replacing cards previously dealt. At the end of each round, all bets are gathered into the central pot.

At any time

during a betting round, if one player bets, no opponents choose to call (match) the bet, and all opponents instead fold, the hand ends immediately, the bettor is awarded the pot, no cards are required to be shown, and the next hand begins. This is what makes bluffing possible. Bluffing is a primary feature of poker, distinguishing it from other vying games and from other games that use poker hand rankings.

At the end of the

last betting round, if more than one player remains, there is a showdown, in which the players reveal their previously hidden cards and evaluate their hands. The player with the best hand according to the poker variant being played wins the pot. A poker hand comprises five cards; in variants where a player has more than five cards available to them, only the best five-card combination counts. There are 10 different kinds of poker hands, such as straight flush and four of a kind.

Variants [edit]

2006 WSOP Main

Event table

Poker has many variations,^[7]^[8] all following a similar pattern of play^[9] and generally using the same hand ranking hierarchy. There are four main families of variants, largely grouped by the protocol of card-dealing and betting:

Straight A

complete hand is dealt to each player, and players bet in one round, with raising and re-raising allowed. This is the oldest poker family; the root of the game as now played was a game known as Primero, which evolved into the game three-card brag, a very popular gentleman's game around the time of the American Revolutionary War and still enjoyed in the U.K. today. Straight hands of five cards are sometimes used as a final showdown, but poker is almost always played in a more complex form to allow for additional strategy. Stud poker Cards are dealt in a prearranged combination of face-down and face-up rounds, or streets, with a round of betting following each. This is the next-oldest family; as poker progressed from three to five-card hands, they were often dealt one card at a time, either face-down or face-up, with a betting round between each. The most popular stud variant today, seven-card stud, deals two extra cards to each player (three face-down, four face-up) from which they must make the best possible 5-card hand.

Draw poker Five-card draw: A complete hand is dealt to each player, face-down. Then each player must place an ante to the pot. They can then see their cards and bet accordingly. After betting, players can discard up to three cards and take new ones from the top of the deck. Then, another round of betting takes place. Finally, each player must show their cards and the player with the best hand wins.

Community card poker Also known as "flop poker," community card poker is a variation of stud poker. Players are dealt an incomplete hand of face-down cards, and then a number of face-up community cards are dealt to the center of the table, each of which can be used by one or more of the players to make a 5-card hand. Texas hold 'em and Omaha are two well-known variants of the community card family.

There are several

methods for defining the structure of betting during a hand of poker. The three most common structures are known as "fixed-limit," "pot-limit," and "no-limit." In fixed-limit poker, betting and raising must be done by standardized amounts. For instance, if the required bet is X, an initial bettor may only bet X; if a player wishes to raise a bet, they may only raise by X. In pot-limit poker, a player may bet or raise any amount up to the size of the pot. When calculating the maximum raise allowed, all previous bets and calls, including the intending raiser's call, are first added to the pot. The raiser may then raise the previous bet by the full amount of the pot. In no-limit poker, a player may wager their entire betting stack at any point that they are allowed to make a bet. In all games, if a player does not have enough betting chips to fully match a bet, they may go "all-in," allowing them to show down their hand for the number of chips they have remaining.

While typical poker games award the pot to the highest hand as per the standard ranking of poker hands, there are variations where the best hand, and thus the hand awarded the pot, is the lowest-ranked hand instead. In

such games the best hand contains the lowest cards rather than the highest cards; some variations may be further complicated by whether or not hands such as flushes and straights are considered in the hand rankings. There are also games where the highest and lowest hands divide the pot between them, known as "high low split" games.

Other

games that use poker hand rankings may likewise be referred to as poker. Video poker is a single-player video game that functions much like a slot machine; most video poker machines play draw poker, where the player bets, a hand is dealt, and the player can discard and replace cards. Payout is dependent on the hand resulting after the draw and the player's initial bet.

Strip poker is a traditional poker variation where players remove clothing when they lose bets. Since it depends only on the basic mechanic of betting in rounds, strip poker can be played with any form of poker; however, it is usually based on simple variants with few betting rounds, like five card draw.

Another

game with the poker name, but with a vastly different mode of play, is called Acey-Deucey or Red Dog poker. This game is more similar to Blackjack in its layout and betting; each player bets against the house, and then is dealt two cards. For the player to win, the third card dealt (after an opportunity to raise the bet) must have a value in-between the first two. Payout is based on the odds that this is possible, based on the difference in values of the first two cards. Other poker-like games played at casinos against the house include three card poker and pai gow poker.

Computer

programs [edit]

A variety of computer poker players have been developed by researchers at the University of Alberta, Carnegie Mellon University, and the University of Auckland amongst others.

In a January 2024 article^[10] published in

Science, a group of researchers mostly from the University of Alberta announced that they "essentially weakly solved" heads-up limit Texas Hold 'em with their development of their Cepheus poker bot. The authors claimed that Cepheus would lose at most 0.001 big blinds per game on average against its worst-case opponent, and the strategy is thus so "close to optimal" that "it can't be beaten with statistical significance within a lifetime of human poker playing."^[11]

blackjack aposta :passo a passo de como apostar no bet365

Leisões de desinformação online serão revisadas após a propagação de falsidades que contribuiu para os motins de extrema-direita, disse Keir Starmer

O primeiro-ministro disse que as mídias sociais não eram uma "zona livre de leis" durante uma visita a uma delegacia policial na sexta-feira, horas antes de dois homens serem condenados por incentivar pessoas nas redes sociais a atacarem hotéis que abrigavam solicitantes de asilo.

Starmer foi questionado sobre o aviso do prefeito de Londres, Sadiq Khan, de que a Lei de Segurança Online não era adequada e precisava ser revisitada.

Starmer disse aos emissores: "Eu concordo que vamos ter que olhar mais amplamente para as mídias sociais após essa desordem, mas o foco no momento tem que ser blackjack aposta lidar com a desordem e blackjack aposta garantir que nossas comunidades estejam seguras e seguras."

Haveram pedidos para que a Lei de Segurança Online, que empodera o regulador de mídia, a Ofcom, a impor multas a plataformas de mídias sociais que falham blackjack aposta abordar a desinformação, seja aplicada mais rapidamente.

Pesquisas da YouGov publicadas na sexta-feira sugeriram que 66% das pessoas acham que as empresas de mídias sociais devem ser responsabilizadas por postagens que incitam comportamento criminoso, e 70% acreditam que elas não são regulamentadas o suficiente.

Dentre aqueles pesquisados pela YouGov esta semana, 71% disseram que acham que as empresas de mídias sociais fazem um mau trabalho combatendo a desinformação durante os motins.

Falando sobre as mídias sociais, Starmer disse: "A primeira coisa que eu diria é, isso não é uma zona livre de leis. E acho que isso está claro pelas prisões e sentenças. Hoje estamos marcados para sentenças de comportamento online.

"Isso é um lembrete para todos que você é responsável, se você estiver diretamente envolvido ou remotamente envolvido, você é culpado e você será levado aos tribunais se você tiver quebrado a lei."

Ele adicionou que executivos de mídias sociais devem ser "mindfuls do primeiro compromisso, que é garantir que nossas comunidades estejam seguras e seguras".

Na sexta-feira, Jordan ParLOUR foi condenado a 20 meses na corte de Leeds por publicar postagens no Facebook incentivando as pessoas a atacarem um hotel que abriga mais de 200 solicitantes de asilo e refugiados na cidade. Foi o primeiro caso do tipo relacionado aos distúrbios recentes na Inglaterra e na Irlanda do Norte.

Tyler Kay, 26, foi condenado a 38 meses na corte do Northampton após incitar ódio racial usando as mídias sociais para chamar de incêndios hotéis que abrigam solicitantes de asilo.

Os ministros estão otimistas de que as condenações desencorajarão novos distúrbios, mas eles prometeram examinar a regulação das mídias sociais mais amplamente nos próximos meses.

Khan disse na quinta-feira: "Acho que muito rapidamente o governo percebeu que precisamos de emendas à Lei de Segurança Online. Acho que o que o governo deve fazer muito rapidamente é verificar se é adequado ao propósito. Acho que não é adequado ao propósito."

Nick Thomas-Symonds, o paymaster general, disse ao programa Radio 4's Today que o governo está preparado para "revisar e considerar rapidamente" a lei, e que a polícia irá "após as

peessoas" encontradas a incitar violência online.

"O desafio de Sadiq Khan é que revisemos rapidamente, consideremos e isso é exatamente o que faremos ... Isso é um desafio político legítimo; é importante fazer isso certo", disse Thomas-Symonds.

"Mas independentemente dessa discussão política, as pessoas que estão agindo agora fazendo coisas ilegais online como incitar violência, encorajar violência, organizar violência, isso é contra a lei agora – e se você estiver fazendo isso agora, assim como se estiver envolvido blackjack aposta ameaças ou distúrbios violentos nas nossas ruas, a polícia irá atrás de você."

A Lei de Segurança Online tornou-se lei blackjack aposta outubro do ano passado e dá à Ofcom o poder de multar empresas de mídias sociais até £18m ou 10% de blackjack aposta receita global se elas falharem blackjack aposta tomar medidas robustas contra conteúdo ilegal que incite violência ou terrorismo.

A Ofcom ainda está elaborando diretrizes sobre como implementará a lei sobre conteúdo ilegal, com a aplicação da lei não esperada até o próximo ano.

As maiores plataformas podem enfrentar bilhões de libras blackjack aposta multas se não cumprirem. Gerentes nomeados podem ser responsabilizados criminalmente blackjack aposta algumas instâncias, e sites podem enfrentar limitações de acesso blackjack aposta casos graves.

Mais de 200 grupos de campanha no Reino Unido e na Irlanda assinaram uma carta conjunta urgindo o Westminster, Belfast e Dublin a trabalharem juntos para responsabilizar as empresas de mídias sociais pela desinformação.

Os grupos de campanha, que incluem 38 Degrees e Hope Not Hate, pediram aos governos do Reino Unido e da Irlanda que estabeleçam uma investigação pública conjunta para "investigar como essas empresas foram permitidas a operar com impunidade e trazer à luz os prejuízos que causaram".
